Oil, Gas and Industrials

Don't Settle for the Status Quo
We must build and maintain the infrastructure of tomorrow, today” — Ed Wiegele

Oil and Gas operators across the value stream, from wellhead to refinery, have experienced every limitation, dynamic, and complication that can arise and put an asset or project in doubt of reaching its full potential. Add in an increasingly vigilant regulatory environment and extreme market volatility, and profitability can seem out of reach.

At TRC, one of the most comprehensive engineering and technical consulting companies in the US, we understand the changing landscape of the Oil & Gas industry and the challenges, new and old, which operators face. For these reasons, we have aligned and integrated our services from permitting and project execution, through to integrity engineering and maintenance, bringing you closer to the work and closer to your team.

Our complete suite of services allows you to achieve your execution and operational goals using proprietary technical and commercial tools coupled our expertise to understand and mitigate risk, both known and unknown. We are here to be your trusted adviser, leveraging our experts, our databases, our tools and software, and our home-grown talent, to be there to help you realize your goals.

Regulatory Permitting and Compliance
As one of the largest and most comprehensive multimedia permitting companies, TRC’s environmental capabilities extend across the air, land, and water to include inspection, monitoring, mitigation and compliance. Our expertise includes NPDES, CWA, NEPA, RCRA, and NESHAP, as well as other state and local standards. Our staff’s strategic thinking lead to successful and timely approvals that facilitate project execution. Construction and post-construction monitoring and reporting requirements provide avenues for realistic implementation measures and planning for project completion and successful asset operation.

Field Services & Inspection
We bring our experience and state-of-the-art technologies into the field, assembling field teams with the best possible mix of technical expertise and geographic proximity to our clients’ locations. Our capabilities include full-spectrum survey services, land and right-of-way acquisition, construction and post-construction inspection and monitoring, NDT, and direct assessment field services.

Engineering & Construction Management
TRC provides end-to-end engineering and project execution services that help clients construct or expand their systems and plants. Backed by decades of experience, the experts at TRC help clients conceptualize, design, engineer, construct and optimize their assets. Our engineers engage as early as possible, delivering a market-driven, commercially-viable project roadmap. We approach each project with a seamless organizational structure that links every service discipline together and forms the backbone of our service offering.

Integrity Engineering & Operations Support
Driven by the utilization of data, the oil and gas industry is at an inflection point for how it builds, operates and maintains its assets. Integrity and operations data must be utilized to drive profitability through safe, effective and efficient operations. Powered by pioneering computing tools and decades of experience, TRC is perfectly positioned to help our clients reach these goals. Every discipline is under one roof, performing full-service integrity management services including program development, data services, risk analysis, corrosion evaluation, integrity engineering and maintenance.

Transaction Advisory Services
When it is time to acquire or divest from your asset portfolio, our teams have the expertise to appropriately value your asset or target, understand the risks, and to price those risks into your investment, ensuring you reach your financial goals. We know how to ask the right questions, identify potential risks and mobilize quickly, deploying the right team with the right plan to execute the work. Our process produces reasonable cost estimates, identifies the full exposure continuum, and quantifies all potential liabilities, all within a business and commercial context.

DRIVEN BY THE UTILIZATION OF DATA, THE INDUSTRY IS AT AN INFLECTION POINT FOR HOW IT BUILDS, OPERATES AND MAINTAINS ITS ASSETS.
Why TRC?

We put clients first by:

• Envisioning new possibilities and engineering sustainable solutions
• Creating collaborative work relationships that drive better results
• Anticipating issues and quickly resolving them

About TRC

Groundbreaker. Game changer. Pioneer. Since the 1960s TRC has set the bar for clients who require more than just engineering, combining science with the latest technology to devise innovative solutions that stand the test of time.

Today we are a global consulting firm for the oil and gas, power, environmental and infrastructure markets. TRC’s 5,000 professionals work with a broad range of commercial, industrial and government clients and the communities they serve. We deliver breakthrough solutions that address local needs – so our clients can better succeed in an ever-changing world.
